

CS312 WEB APP DEVELOPMENT 2025/26

ASSESSMENT 1 – SUBMISSION FORM

Please do not sign or include your name on this form.

Your student number: • 202302857

Your URLs on DEVWEB (please type a space after pasting the URL so it is converted to a link):

Shop Front:	• https://devweb2025.cis.strath.ac.uk/~mjb23137/CS312%20Assessment/src/Front-End/HTML-PHP/index.php
Admin Page:	• https://devweb2025.cis.strath.ac.uk/~mjb23137/CS312%20Assessment/src/Back-End-Admin/AdminLogin.php (Username: Admin) (Password: 1234)

Answer each of the following questions:

What was the most challenging part of the project and how did you overcome it?:

- The most challenging part for me was absolutely the Cart. My original implementation for it was fairly simple, from recollection, when you added an item to cart, you would be taken to that page and the id was read from the url and that id was used to match an existing tour and display it ready to purchase. Issue being, the cart could only handle one item, that transition was the hardest for me, I used W3schools and read through much of that to understand the utility of sessions, how to read and write to them, and iterate through them. Once I learned that I was able to replace parts of my old code with the newer implementation which made things easier.

Why did you structure your database and booking flow the way you did?

- The way I did it was 3 tables, Tours, storing every tour and all details about the tours. Bookings, every tour that has been bought was made into a booking with the details of who booked it stored for easy reference. Finally an Order table to manage bulk orders and single orders. In Booking for example, OrderID and TourID were FK's so that I could have them linked with my bookings, meaning that it was easy to ensure all tours were linked with respective bookings, and each booking was connected with an order. This made many of my admin methods possible (i.e delete order when no bookings left, delete all bookings when order deleted etc)

How did you ensure readability and accessibility?

- I made sure after finishing, to convert all of my font sizes to their rem equivalents to ensure fonts were resized as needed for users
- alt text was applied to images, I had my website checked by family members with dyslexia to ensure the website worked fine for them and was understandable what was going on
- I researched what the best fonts were to use for being dyslexia-friendly and found some of the more commonly used ones weren't as effective as originally believed, found a paper from the University of Michigan (linked in program) that believed Arial to be one of the most readable fonts and chose that. Had family members test it and they found it to be readable

at would you
rove if you had more
è?

- I would like to add the ability to remove individual items from the cart. I have a button for clearing the cart, but not to remove individual tours from it.
- I have an automatic slideshow commented out in my index page, with more time I would like to set that up to be functioning for my tour images when the user hovers over a tour entry.
- There's a logical oversight in my cart which I did not realise until recently after finishing my video and submission, My number of people I use for my calculations assumes that the same number of people will be going to each booking, and does not account for more or less going to other bookings in an order. I would like to fix this.
- I would like to include better form validation for my admin page regarding dates, and existing tourID's, it does not account for this, and I wanted to implement it but was running too short on time and had to prioritise balancing my other assignments so could not fulfil this.
- I would love to have a full settings page, along with additional accessibility features and dark mode. I was originally planning to have the features of this entry in the original implementation but due to deadlines with assignments it had to unfortunately stay conceptual.
- I feel my styles for many of the pages, particularly the admin page, were rather uninspired and used code from my other pages to save time and get the assignment done to as high a quality as possible, so I would like to improve the admin style hopefully. Final thing would be that my code is rather messy, it does it's job, but it doesn't look neat at all, with additional time I would attempt to clean it up, especially my CSS file that has some duplicates under very similar names
